Company Overview

Founded in April 2005, Mesh Systems provides software, infrastructure products, and systems integration services for end-to-end wireless sensor network applications. The Company's products and services transform sensor data into actionable business information.

Target Markets and Applications

The Company's products and services are used in the food manufacturing, specialty chemical, pest control, agricultural, water treatment, and oil & gas industries. Applications include environmental monitoring, consumables monitoring, replenishment logistics, remote process monitoring, regulatory compliance assurance, and security.

Business Model

The Company derives revenues by providing system integration services and through subscriptions to its MeshVista™ Portal. The Company is also a value added reseller of wireless sensor network devices, communications modules, and wireless data services.

Technology

The Company's key technology is its MeshVista™ software platform. Consisting of MVNode, MVGateway, MVPortal, and MVClient components, MeshVista software connects wireless sensors to each other, to wide-area networks, to databases, business information systems, and ultimately to people. Based on a tiered approach and built on industry standards, the MeshVista platform ensures secure and efficient delivery of information from wireless sensors, across local area networks, wide area networks, and the Internet to people and processes that rely on timely and accurate sensor information to perform their functions.

Partners

The Company's technology and supply-chain partners include Microsoft Corporation (Redmond, WA), Coronis Systems (Montpellier, France), Telit Wireless Solutions (Morrisville, NC), Raco Wireless (Cincinnati, OH), Eazix / Integrated Microelectronics (Manila, Philippines), and Pensar Electronic Solutions (Appleton, WI).
